## Silastar Film Technology Specs

► **Designed for the most difficult conditions**

Specifically designed and produced for the harshest conditions, with 12 month guarantee against UV.

► **Excellent tack performance**

The improved tack properties of the film ensure excellent bonding of the film layers, which creates better anaerobic conditions. Stretch films are specially designed for all high speed wrapping machines and for bales of increasing weight.

► **Maximum resistance**

Silastar is an extruded film with very high tack levels for superior performance. Made from a special blend of resins to maximize puncture resistance.

► **Oxygen barrier**

Provide superior oxygen shield properties to support the fermentation process.

Silastar stretch film is a high-performance silage wrap engineered with five layers and a thickness of 25 µm, ensuring superior durability and protection. Designed to meet all silage needs in the field, it provides excellent adhesion and outstanding puncture resistance, effectively sealing forage to maintain optimal conditions for fermentation. By creating an airtight barrier, Silastar stretch film preserves the nutritional value of ensiled crops, preventing spoilage and ensuring high-quality feed for livestock. Its advanced multi-layer technology guarantees reliable performance in various weather conditions, making it an essential solution for modern silage management.
